

techUp™ by dvg

The Made in Italy Espresso only with TechUp™

Glycerine manometer for reading the water pressure

Waterproof thermometer with one inputs for thermocouple T

T-type thermocouple for quick and accurate temperature reading

TechUp™ is the new measuring instrument manufactured by **DVG®**, which allows to verify with extreme precision the values of temperature and pressure of the water that get out from the brewing group.

TechUp™ is an innovative tool, developed in cooperation with important worldwide recognized partners in the coffee world, **which allows to certify the professional coffee machines** for the correct Made in Italy Espresso supply.

TechUp™ is able to measure water temperature with an accuracy of **0,1 degree** and response time of **0,15"** thanks to a single T-type thermocouple with mineral insulation. Combined with our digital thermometer or equivalent instrument it ensures fast and accurate data reading.

Pressure is also a parameter to keep monitored. **TechUp™** has integrated a **glycerine filled pressure gauge** that provides an accurate reading of group head water pressure (**0-25bar, 0-350psi**).

TechUp™ is supplied in a **practical case** complete with digital thermometer and group cleaning kit.

It's available for the main commercial coffee machines.
